

MULTIEYE® VideoCenter III

The MULTIEYE VideoCenter III (VCIII) is an easy-to-use, multi-functional video management solution for the query of many MULTIEYE recorders. Depending on its version, the VCIII can inquire up to 32 recorders simultaneously. The VCIII is characterized by a considerable performance improvement and a number of new features and offers an unbeatable cost-performance ratio. There are two designs of the VideoCenter III: Business and Enterprise.

In Detail

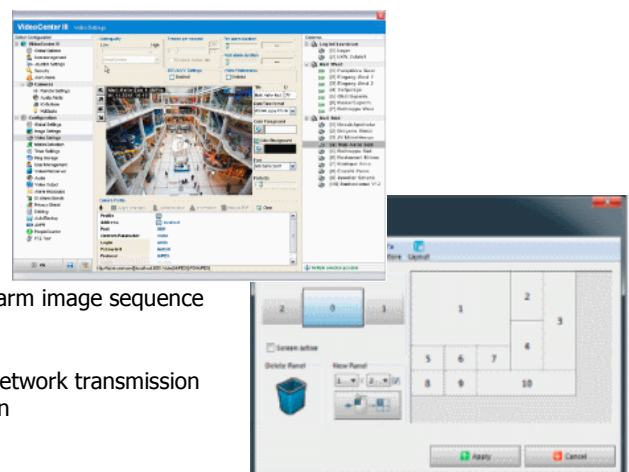

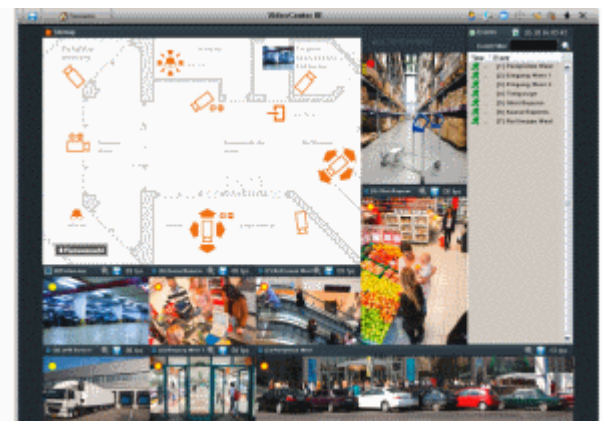

The VCIII manages and visualizes up to 256 monitor windows for live display, replay, IO operation, browser plug-ins and logfiles. HotSpot display (alarm images) and site plans may also be assigned to the monitor windows. The VCIII supports up to 4 monitors, each monitor can display up to 64 windows. The multi-screen layout may be adjusted individually and stored user-dependent. With the dynamic HotSpot function cameras may be displayed via mouse click and/or automatically via alarm in the HotSpot window. The programmable HotSpot function disposes of alarm image sequence display in order to display current alarms/events.

Site plans are generated through the site-plan editor and logically connected with cameras and switch elements. Playback in the VCIII is done with the integrated player and its motion-index display. In VCIII the main focus lies on artec technologies' own „Hot Zone Megapixel Zooming“ function as well as on the DirectStream technology for an economic utilization of resources during queries of IP-video streams. In the multiscreen monitor windows, up to four internet browsers can be opened for third-party applications, such as two-way audio, video telephony, people counting or for monitoring recorder-independent IP cameras, encoders and external video recorders.

The VideoCenter III is available as software with USB dongle or as a complete monitoring station with two or four DVI/VGA outputs. Each client requires its own license.

Highlights

- Site-map based video management solution for the simultaneous monitoring of up to 32 MULTIEYE recorders
- Easy to operate
- Support of 4 multiscreens with up to 256 camera monitors
- Multiscreen layouts can be created individually and stored user-specifically
- HotSpot function. Manual event-controlled switching, integrated alarm image sequence displays as 4/8/16 split screen
- Automatic alarm display activation
- Live display with full quality and resolution through DirectStream network transmission
- Bandwidth optimized transmission through recorder re-compression
- Display and operation of switching inputs and outputs (IOs)
- Site-map editor for generating site plans with interactive icons
- Up to 4 internet browsers can be integrated into the multiscreen
- PTZ control via popup window, keyboard or joystick
- Hot Zone megapixel zooming function
- Support of 360° ImmerVision IMV1-1/3 panamorph lenses with distortion free digitalization and digital PTZ control
- User management
- ONVIF Support
- Ring-storage for Backup module
- New camera finder and revised dialog
- Start-up of camera presets due to contact alarm
- Load/Save of PrivacyShield settings
- Auto backup via IO on/off
